

Enterprise Project Management Solution

The Microsoft Office Enterprise Project Solution (EPM) is based on *Microsoft Office Project Server 2007*.

This Solution enables organisations to better manage projects and resources, collaborate across the entire enterprise, and effectively analyse and reports on both projects and programs.

With *Microsoft Office Project Server 2007* and its clients, your organization can more effectively manage and coordinate work ranging from one-time projects to complex programs across the entire project life cycle.

Office Project Server 2007 is designed to be accessible by its clients, *Microsoft Office Project Professional 2007* and *Microsoft Office Project Web Access*.

Project Management

Managing a project to completion is a complex, multi-faceted task that includes solid planning, deft execution, and ongoing resource management and process tracking.

Microsoft Office Project Server 2007 provides powerful tools for scheduling, tracking, and updating projects that help you optimise resources, minimise costs, manage scope, and deliver on time. Team members can enter labour and status directly to keep project information continuously updated.

As the project moves forward, it's important to update and monitor progress and to keep participants, constituents and to keep senior management apprised.

The Microsoft EPM solution provides a wide range of reporting and analysis that you can deliver in almost real time.

Microsoft Office Project Server 2007
